100059 seqs, 36664827 residues

Searched:

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 50 summaries

SwissProt_39:*

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/lnhibin activity, cencer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tang YT,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cencer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang YT,

Sequences AAY69576-Y69586 and AAY69598-Y69599 represent peptides that may CC be used to induce anti-IgE (immunoglobulin E) autoantibodies in a dog. CC IgE is an important mediator of canine allergic responses, including Type CC Immediate hypersensitivity. It is estimated that up to 30% of all dogs CC suffer from allergies or allergy-related skin disorders, and allergic CC dermatitis is thought to affect between 3 and 15% of dogs. Common canine CC allergen, the IgE binds to receptors on mast cells. The IgE molecules CC allergen, the IgE binds to receptors on mast cells. The IgE molecules CC can then become cross-linked, which induces the mast cells to release histamine, which leads to the manifestation of allergic symptoms. The peptides of the invention correspond to epitopes of canine IgE, or conservative variations thereof, that are accessible in circulating IgE bund to mast cells. The autoantibodies produced on conservative variations thereof, that are accessible in circulating IgE avoiding the possibility that they may cross-link bound IgE molecules. CC which would exacerbate an ongoing allergic response even in the absence CC is allergen. Anti-IgE autoantibody induction results in an immune response that targets the IgE-expressing B cell, which affects IgE conservations acceptate an ongoing allergic response even in the absence CC is grithesis by downregulating IgE production by B cells and/or targetting CC synthesis by downregulating IgE production by B cells and/or targetting CC care therefore useful for destruction. The peptides of the invention care therefore useful for the treatment or prophylaxis of allergic

                 The invention provides a new human protein with glycoprotease activity. The protein can be expressed by standard recombinant methodology. The glycoprotease-like protein can be used; to screen for specific-binding agents (receptors or ligands) or inhibitors or agonists of its binding interactions; to raise antibodies or elicit an immune response; as a tissue marker; as a nutrient source or supplement; as a research reagent; and as a therapeutic/biologically active agent, e.g. for regulating cell proliferation or differentiation; as immunostimulant or cell proliferation or differentiation; as immunostimulant or immunosuppressant; as thrombotic agent; for stimulation of tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  can be used for prophylaxis or treatment of control in the method of the AAY50876-Y50900 represent peptide mimotopes used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined. epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO9967399-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 9; Page 12; 30pp; English.

A.Poscription: Nucleotide sequence analysis of the region of Variola virus XhoI F O H
A.Reference number: $46868
A.Recession: $46877
A.Status: preliminary
A.Molecule type: DNA
A.Residues; I-354 <ACNL

A:Title: The complete DNA sequence of vaccinia virus.
A.Reference number: A4253; MUID:91021027
A.Contents: annotation; possible protein coding frames
A:Note: neither amino acid nor nucleotide sequence is given
C:Superfamily: vaccinia virus surface antigen; immunoglobulin homology
C:Keywords: glycoprotein; surface antigen

"Identification and nucleotide sequence of the gene encoding a surface antigen induced by vaccinia virus.";
Virology 177:588-594(1990).

1- FUNCTION: MAY BIND INTERLEUKIN-1 AND/OR INTERLEUKIN-6 AND PREVENT THESE CYTOKINES REACHING THEIR NATURAL RECEPTORS. IN CONSEQUENCE THE INFLAMMATORY RESPONSE WOULD BE DIMINISHED AND VIRUS REPLICATION ENHANCED.

1- SUBCELIULAR LOCATION: INDUCED ON THE SURFACE OF VACCINIA VIRUS-INFECTED CELLS.
                                                                                                                                                                                                                       This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /label= Phe or Phe(NO2) or MePhe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The peptide is a leucine-enkephalin analogue, opt. having the C-terminal amidated. It is an analgesic having stronger activity compared with the enkephalins. It is prepd. by conventional chemical synthesis, either in liq. phase or solid phase.
                                                                                                                                                                                                                                                                             New peptide and its pharmaceutically acceptable salts - has opioid action, useful for analgesics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                           This peptide is an example of a highly generic formula representing opioid oligopeptides which selectively bind to receptors on cells. The peptides have analysic, antitussive and antidiarrhoeal activity. They can also be used for treating various cancers such as lung or They can enter the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period of the period
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New opioid oligo:peptide cpds. - having analgesic, antitussive, antidiarrhoeal and antitumour activity

OM protein protein search, using sw model

April 21, 2002, 10:44:57;

Search time 17.3 Seconds (without alignments) 10.597 Million cell updates/sec

Title: US-09-281-760C-2 18

Perfect score:

Scoring table: BLOSUM62

Gapop 10.0 , Gapext 0.5

Searched: 100059 seqs, 36664827 residues

Total number of hits satisfying chosen parameters: 29

inimum DB aximum DB seq length: 0
seq length: 5

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 50 summaries

Database :

SwissProt_39:*

score greater Pred. No. d. No. is the number of results predicted by chance to have a re greater than or equal to the score of the result being printed, is derived by analysis of the total score distribution.
